

Using Stylesheets in Designer

I don't understand the behaviour of Designer as shown below

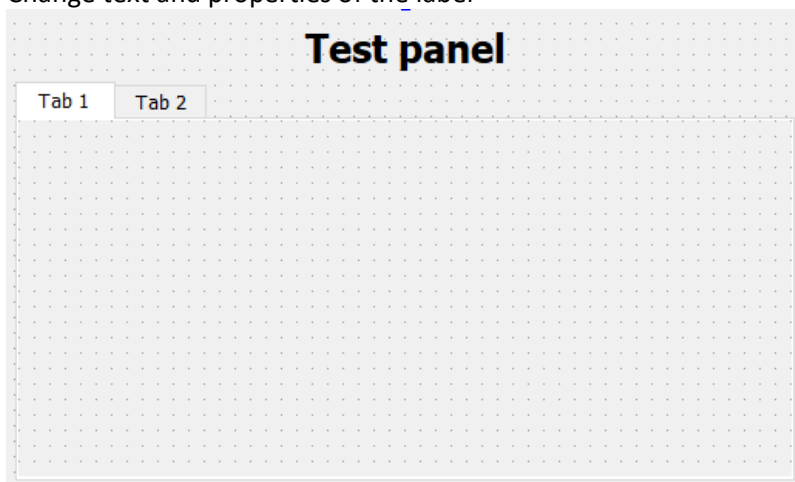

I add a label and a Tab Widget

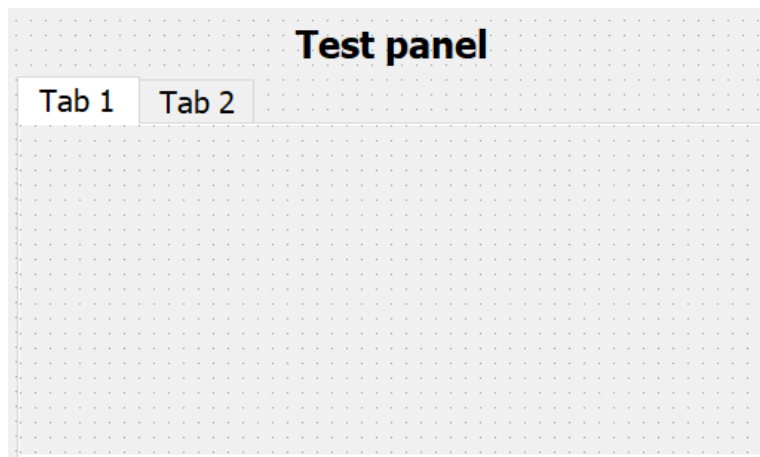

Apply a vertical layout

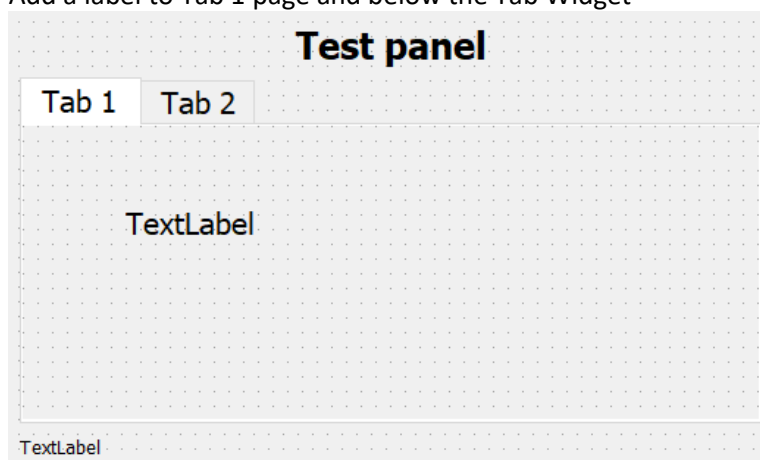

Change text and properties of the label

Change Font size property of the Tab Widget

Add a label to Tab 1 page and below the Tab Widget

My first question

Why is the font size of the Label on the Tab Widget 12 and note the default value 8?

▼ font	A [MS Shell DI...
Family	MS Shell Dlg 2
Point Size	12

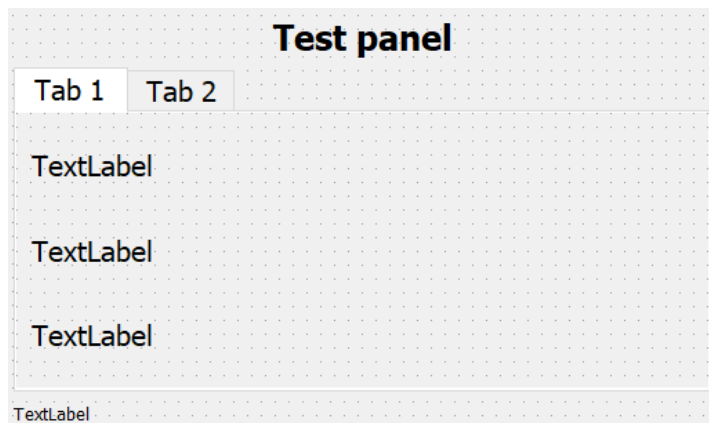

It's in fact the same font size as for the tabs.

Point Size in bold shows that the font size has automatically been changed by the Designer, but why?

Outside the Tab Widget the default size is used

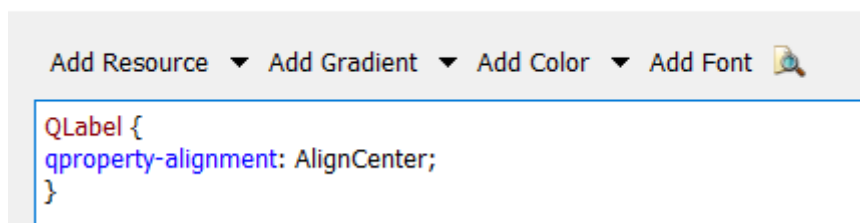

▼ font	A [MS Shell DI...
Family	MS Shell Dlg 2
Point Size	8

Now I add a few other Labels and a vertical layout to the Tab 1 page

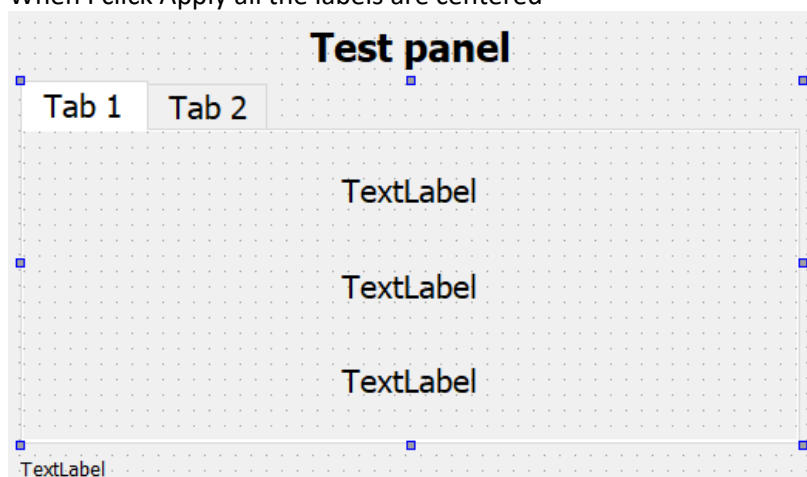

I would like that the text in all labels in the Tab Widget are centered using Stylesheets
From the documentation I know that {text-align: center} is not supported for QLabel but I found on the Internet that the following is working
QLabel {qproperty-alignment: AlignCenter;}
So, I right click on the tabs to open the Stylesheet editor and add the code above

 Edit Style Sheet - Qt Creator

When I click Apply all the labels are centered

But when I close the Stylesheet editor the font size of the labels is set to the default value 8.

Why?

Worse, when I run the application, the labels are even not centered
